

February 2025

Statement Regarding Suitability of Aluminium Containers for Microwave heating

Item no: 0043010100

We hereby confirm that the above-mentioned aluminium container is tested according to NF D21-314:2023 standard during which:

1. Product demonstrated conformity in terms of performance and safety during microwave heating at 800 watts.
2. No arcing was observed during performance or safety evaluations.
3. The containers maintained a satisfactory aspect before and after testing.

Based on this, we can confirm that the above-mentioned item no is suitable for microwave heating.

Important Note

It is recommended that user instructions are available to end-users to ensure compliance with relevant safety and usage guidelines.

For further guidelines on the use of aluminum trays in microwave ovens, please refer to the European Aluminium Foil Association (EAFA) guidelines ([Aluminium foil and microwave ovens - European Aluminium Foil Association](#)).
